

Our range of modular LED signs can be bolted together to display dynamic messages in a variety of styles to inform or instruct your staff, visitors or customers. Controlled by RPX-LED, our interactive LED Application Software is easy to use and set up.

The standard outdoor weatherproof sign measures 960mm x 160mm x 165mm (w x h x d) and weighs 10kg. Characters can be displayed in full colour and in a wide selection of fonts and sizes, messages can be side-scrolled, flashed or revealed. Additional features include the automatic display of date and time.

The hi-bright LEDs can easily be read from 30m or more as vehicles approach a site. Multiple signs can be used for multiple lanes of traffic with different messages displayed on each.

The LED signs are connected to a RoadPixel ANPR computer using a network (IP) connection i.e. using a crossover cable or standard network switch. The intuitive RPX-LED Application Software allows users to pre-program messages for each category of user in the RPX Database.

KEY USES

- Welcome Messages – Hotels & Golf Clubs
- Customer Guidance – Pre-Booked Parking e.g. Airports
- VIP Messages – Car Dealerships
- Deterrent Factor – Remote Driveways e.g. Hotels, Golf Clubs, Schools and Colleges

LED Signs are normally found at site entrances or gatehouses and are used to welcome and guide traffic to the correct location but also have a useful role to play in the security of a site.

WELCOME MR SMITH
PLEASE TURN LEFT TO MAIN CAR PARK

RoadPixel LED Sign's can be used to read and display the number plates of all passing traffic making the vehicle occupants aware that their vehicle has been logged by the system. These types of installations have been used with considerable success on remote driveways to golf clubs and hotels to deter thieves.

Customised Messages

If a number plate is read and recognised as being in the RPX-LED database then a customised message can be displayed on the LED sign e.g. "Welcome Mrs Jones, please park in visitor bay 5".

LED Signs can also be used to welcome VIP visitors to a location such as a car dealership and can be used to direct vehicles who have pre-booked parking in an airport car park for example.
